

Advanced

THE ICDL ADVANCED MODULES

Last year, the ECDL Foundation Ltd announced the expansion of its ICDL Advanced level computer skills certification to meet market demand. The ICDL Advanced modules will now be available in Australia from early 2005 and they build on the success of the core ICDL program in which more than 4.2 million people are participating worldwide.

ICDL Advanced is an intensive computer skills certification program requiring the candidate to realise much more of the functionality and features of an application. A certificate is awarded upon the successful completion of each module. Candidates are able to certify their skills and competency in any of four application domains – Word Processing, Spreadsheets, Databases or Presentations.

ICDL Advanced is for anyone who wants to certify their ability to undertake more complex tasks, using richer functionality of applications and producing larger, extended outputs.

If you are interested in 'piloting' the ICDL Advanced modules within your ICDL Test Centre or would simply like some additional information, please contact Scott Hansen, ICDL Client Services Officer, at scott.hansen@acs.org.au.
